

Project template

Implement the following tasks to solve the problem:

1. Read the dataset
2. Fill missing values
3. Identify the wrong values
4. Convert objects to numeric data (Identify using LabelEncoder, OneHotEncoder or get_dummies)
5. Drop outliers
6. Describe your output
7. Calculate the correlation between features
8. Set input and output
9. Transform input by preprocessing (Polynomial) and describe the process
10. Fit and predict model by Linear Regression, SVR and Decision Tree Regressor
11. Use regularization methods
12. Evaluate and describe your conclusion
